 **HamiltonJet** *470*
Sportsman Range

Forget what you think you know about jet boat design and performance, the HamiltonJet 470 takes a bold new approach, with its focus on YOU! We've taken your feedback and comments from many years jet boating on our unique NZ rivers and lakes, and from this we've reworked every aspect of our boat design philosophy to create something guaranteed to set you apart from the crowd. Everything about the HamiltonJet 470 is intended to provide you and your family with the ultimate jet boating experience. Comfort, safety and performance are included without compromise, packaged in a sleek, stylish and innovative hull design that not only turns heads now but will also stand the test of time. The HamiltonJet 470 is just the first in a new series of high-performance recreational jet boats you've helped design to be the best on the water. We don't imitate... we evolve!

sleek
stylish
innovative

High quality molded seats with more leg room for driver and passengers

Large bow storage hatch

Glove compartment complete with USB charger

Key boat controls at your fingertips

Designed with the Kiwi jet boater in mind, the new HamiltonJet 470 breaks the mould for recreational jet boat design. Following in-depth customer research and extensive product development, HamiltonJet has created the most functional, comfortable, stylish and practical jet boat - perfect for discerning adventurers who demand superior performance in all situations. The feature-packed HamiltonJet 470 is not only a boat that commands attention on lake or river, it provides a level of control and comfort previously unseen in the market. The simple elegance of its design will leave you wondering why no body thought of it before. For those looking for the best Kiwi jet boating experience, the HamiltonJet 470 is the ultimate solution.

The HamiltonJet 470 is the next design evolution of one of New Zealand's most popular and proven recreational jet boat models, the HamiltonJet 151. Taking the base 151 hull, HamiltonJet has increased the strength of the delta keel and hull bottom, and reconfigured the hull strakes to improve lift and cornering performance. The result is a stronger boat that tracks smoothly and turns tightly and consistently in all conditions.

The 470's wider cockpit and distinctive curved sheer line provides increased height in the cockpit, dash and windscreen, offering more space as well as better protection from the elements behind the raked windscreen.

The moulded fibreglass deck (a HamiltonJet tradition) allows for the 470's fluid curves and the seamless integration of hatches and insets from bow, through the dash and cockpit to the transom. Along with large fore and aft deck hatches, the 470 incorporates a dashboard glovebox on the passenger side, as well as an optional insert for the engine gauges, allowing customised gauge layout and easier access for maintenance.

The large dash foot-well and walk-through windscreen provide quick, safe and easy access to the foredeck and bow. What's more, the handrail is positioned BEHIND the windshield for better warmth and comfort

HamiltonJet 470 Features & Specifications

- Foredeck hatch and storage well
- Walkthrough windscreen
- Dash step well
- Curved handrail inside windscreen
- Dash glove compartment with USB charging socket
- Dash insert for custom gauge mounting
- Rocker switch panel
